Carpet Care Maintenance

CARPET CARE SYSTEM

DAILY MAINTENANCE

matting

Overloaded mats cannot trap soil and prevent it from entering the building. Be sure to vacuum mats daily at all entrances.

spotting

Removing spots and spills as soon possible (before they become stains) is crucial to keeping carpet looking its best. Refer to your supervisor, carpet care manual, or spotting guide for full details on proper spotting procedures

vacuuming

Heavily trafficked areas should be vacuumed at least once a day. Lightly trafficked areas, such as offices, can be vacuumed once or twice a week.

SURFACE CLEANING-BONNET CLEANING

spotting

Refer to your supervisor, carpet care manual or spotting guide for full details on proper spotting procedures.

vacuuming

Removing particulate soil before bonnet cleaning produces optimal results. Be sure to thoroughly vacuum your entire work area before bonnet cleaning.

bonnet cleaning

There are two methods commonly used for bonnet cleaning: spray and immersion. Both produce excellent results. The big difference is dry time. The spray method usually dries in one half hour, immersion in about one hour. Refer to your carpet care manual or product label for full details on proper bonnet cleaning procedures.

SURFACE CLEANING - FAST EXTRACTING

spotting

Overloaded mats cannot trap soil and prevent it from entering the building. Be sure to vacuum mats daily at all entrances.

vacuuming

Removing particulate soil before bonnet cleaning produces optimal results. Be sure to thoroughly vacuum your entire work area before extracting.

fast extracting

As the name implies, fast extraction is an efficient way to clean large carpeted areas quickly. Refer to your carpet care manual and product label for full details on proper fast extraction procedures.

DEEP CLEANING/RESTORATION

spotting

Overloaded mats cannot trap soil and prevent it from entering the building Be sure to vacuum mats daily at all entrances.

<u>vacuuming</u>

Removing particulate soil before bonnet cleaning produces optimal results. Be sure to thoroughly vacuum your entire work area before extracting.

deep extracting

Deep extraction cleaning provides the most thorough cleaning of carpet. It removes embedded soil while reducing detergent residue. There are two methods commonly used for deep extraction: extraction clean and extraction rinse. Both produce exceptional results. Refer to your carpet care manual or product label for full details on proper extraction procedures.

Innovation is Essential.
