

# Green Floor Care

## Maintenance Procedures

### Daily Maintenance

#### 1 dust mop

The first step in all floor maintenance operations is dust mopping.

Start by scraping up any chewing gum or attached labels with a long-handled or razor scraper. Sweep around all hard-to-reach areas.

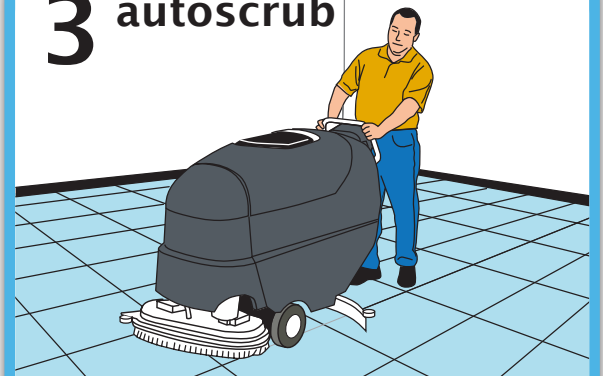

Using a clean dust mop, sweep all loose soil into main aisle and consolidate for immediate disposal.

#### 2 spot mop

All spills or tracked-in soil should be spot mopped immediately. Use a 2 oz. per gallon solution of Green Clean (8513FC).

#### 3 autoscrub

Autoscrub the floor with red pads and a 2 oz. per gallon solution of Green Clean (8513FC). Pick up the trail left by the scrubber with a mop and clean, cold water.

For areas that are damp mopped, use a clean mop and a 2 oz. per gallon solution of Green Clean.

### Weekly Restoration

#### 1 dust mop

Weekly restoration keeps floors looking their best.

Start by scraping up any chewing gum or attached labels with a long-handled or razor scraper. Sweep around all hard-to-reach areas.

Using a clean dust mop, sweep all loose soil into main aisle and consolidate for immediate disposal.

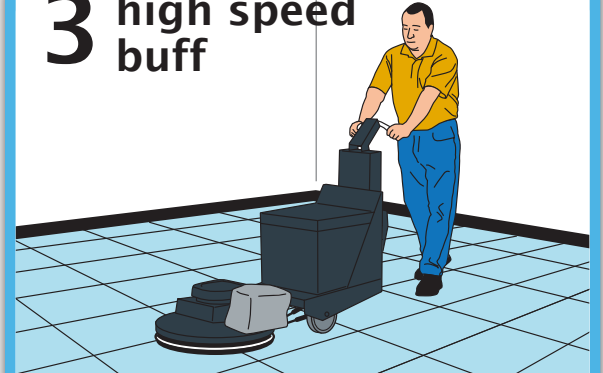

#### 2 restore

Autoscrub with red pads and a 2 oz. per gallon solution of Citrus Scrub 'N Shine (525FR). Pick up the trail left by the scrubber with a mop and clean, cold water.

For facilities without a scrubber use a clean mop and bucket with a 2 oz. per gallon solution of Citrus Scrub 'N Shine. Allow floor to dry before buffing.

#### 3 high speed buff

Buff the entire facility using a high speed machine and buffing pads. Turn pads often to prevent pad loading. Always dust mop after buffing.

### Periodic Scrub and Recoat

#### 1 dust mop

When floors won't respond to their original high gloss look with restoration, it's time to recoat.

Start by scraping up any chewing gum or attached labels with a long-handled or razor scraper. Sweep around all hard-to-reach areas.

Using a clean dust mop, sweep all loose soil into main aisle and consolidate for immediate disposal.

#### 2 autoscrub

Scrub the floor with scrub pads and an 8 oz. per gallon solution of Citrus Scrub 'N Shine (525FR). Make sure vacuum is on and squeegees are down while applying solution. Rinse the floor immediately and allow it to dry thoroughly.

#### 3 apply finish

Using a clean finish mop and a bucket with a plastic liner, apply a coat of G2 Green Finish (8201FF), staying at least 6" away from the edges. Always apply finish in thin, even coats.

If applying more than one coat of floor finish, allow at least 30 minutes dry time between coats.
